

# new PECUSO sugar cane

NOGUEIRA

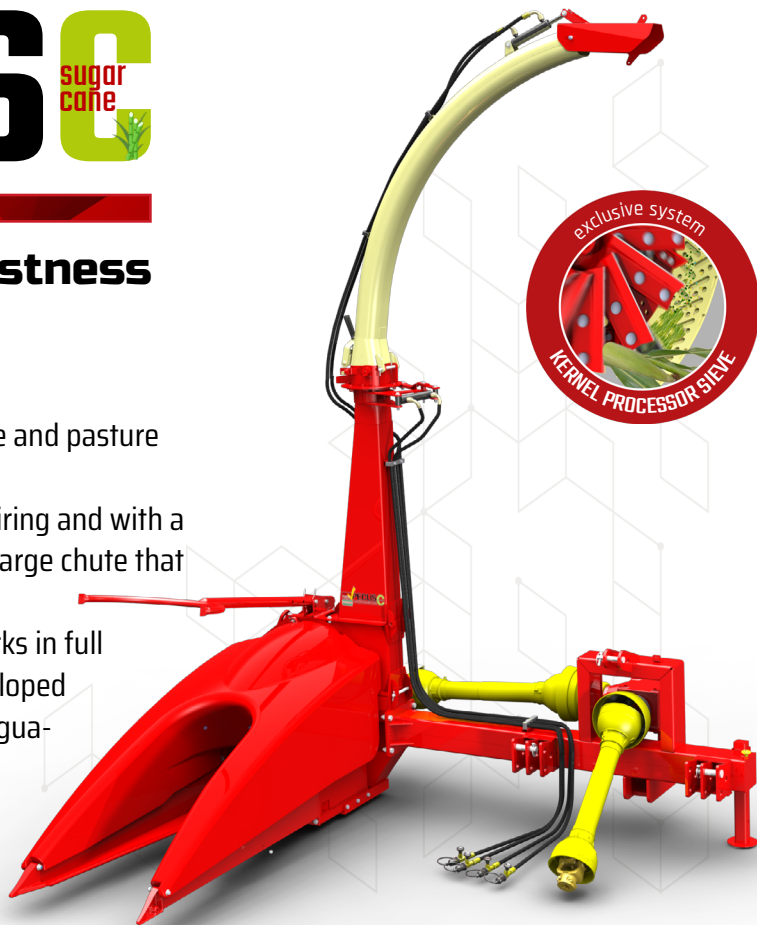

## Robustness

The New Pecus Cañera was built to handle sugarcane and pasture harvesting toughly.

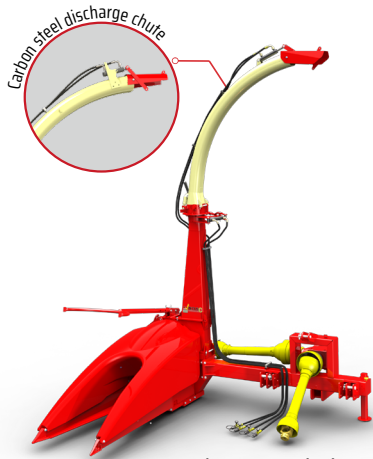

As standard features, it is equipped with a special fairing and with a hydraulically controlled carbon steel discharge chute that facilitates operation.

Its powerful rotor with 14 knives and 7 launchers works in full synchronism with the gathering drum that was developed with high-resistant pinions, equipped with 4 rollers, guaranteeing more efficiency in the sugar cane harvest.

A special design and construction is used on the link arm to withstand heavy loads.

PTN 1000

Technical Features

|                            |                         |
|----------------------------|-------------------------|
| Production                 | Up to 32 TON/HR         |
| Chop size                  | 24 (from 2 mm to 36 mm) |
| Number of rotors           | 1                       |
| Number of knives           | 14                      |
| Number of rolls            | 4                       |
| Drive                      | Tractor PTO Shaft       |
| Recommended PTO horsepower | From 80 up to 120 hp    |
| PTO shaft needed rotation  | 540 rpm                 |
| Transmission system        | Gearbox / pulley        |
| Kernel Processor Sieve     | Included                |
| Weight                     | 850 kg / 1873 lb        |
| Rotor rotation             | 1500 rpm                |
| Command options            | Hydraulic               |
| Coupling                   | Cat II                  |
