

Row-independent Forage Harvesters

Create your unique route towards success!

Discover our impressive and versatile FTN 2300, Nogueira's new forage harvester!

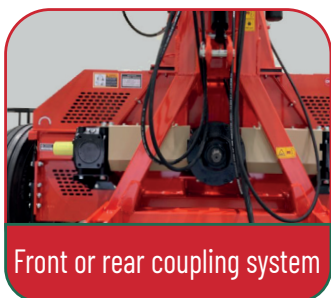

Versatile coupling: Our machine offers the possibility of working with both front and rear PTO, providing you with flexibility and different working configurations.

Double rotor with 12 blades and 12 launchers each: Enjoy exceptional chopping performance and achieve efficient harvesting and uniform cutting in various types of crops.

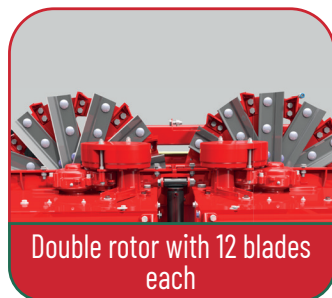

Wide front coverage: With an impressive working width of up to 2.3 meters, the FTN 2300 allows you to harvest lines linearly and transversally in fields planted in rows or broadcast, thanks to its total area system. It has the capacity to harvest up to five (5) rows with spacing of up to 50cm or three (3) rows with spacing of up to 90cm.

- Simplified fuse pin replacement due to the new locking system;
- New lubrication system, directly in the pickup box;
- Support wheel and side deflector;
- Shorter distance between the gathering drums, promoting better flow of the product inside the equipment;

Front or rear coupling system

Double rotor with 12 blades each

Easy-to-use lubrication system

Easy and hassle-free attachment and detachment

Características Técnicas

Production	hasta 54 t/h	Power source	tractor PTO
Cut sizes	12 (from 2 to 36mm)	Required Power at PTO	desde 140 hasta 180 cv
Number of rotor	1	Required revolution at PTO	540 RPM or 1000 (optional)
Number of drums	2	Transmission system	gearbox
Number of blades	14	Kernel processor sieve	included
Number of gathering drums	4	Approximate weight	2118 kg
