

SOFT DUO 1300

Fertilizers and Distributors

The Soft Duo 1300 is a double distributor with 4 blades with hydraulic adjustments and gate openings that allow the product to be thrown further or closer to the equipment, making a uniform distribution of the product.

It works with pre-germinated products, granulated fertilizers, calcareous, seeds, correctives, etc. being granulated or in powder and being able to be supplied with a loader shovel or another type of implement for loading.

It is a super-resistant product, it has a range of 16 to 36m, and because it has an independent launching system, it makes work easier to distribute on edges.

It has a practical and precise dosage rate control system (kg/ha), and its capacity is 1,300 liters beyond corrective measures that minimize waste.

Its structure is made of steel, protective discs, gates, and internal closing of stainless steel, in addition to a tank all in polyethylene.

○ Easy coupling into the 3 points

Discs that allow launching from 16 to 36 mm with uniform distribution

Easy dosing calibration access

Technical Features	SOFT DUO 1300
Required revolution at PTO	540 rpm
Loading capacity	1.300 lt
Required power at PTO	30 up to 50 hp
Height	1,5 m
Weight	274 kg
Working width	16 up to 36 m
Width	2,35 m
Tractor lifting capacity	From 1.800 kg*
Coupling	Catagory I & II
Height	1,3 m
